HP

The heat protection film

IS IT WARM ON THE BACK SEAT? WOULD YOU LIKE TO HAVE YOUR CHILDREN TRAVEL IN A NICE SHADE AND IN SAFETY?

You park your car, which **gets hot** in a few hours, and all the parts inside radiate the heat. **The child safety seat is 60 degrees** and even if you start air conditioning your car, it will not get cooler in 10 minutes. If you put your children in the child's seat, they will immediately

get soaked in sweat, so you cannot turn on the air conditioning. Also, unbearable heat continues to radiate through the glass. The ideal **solution** is a **heat protection film**, whose entry level is the **SkyFol HP** series.

Up to 58% heat protection

Filter the heat right at the window. The fine metallic layer in the HP series filters infrared radiation, therefore is **protects against scorching heat**. The film **increases your travelling comfort** by light filtering, as well as by heat protection.

Aesthetic appearance

A flitting piece of cloth? Horrible sunshades? Come on. Window films are **aesthetic products** you can always trust, while they also provide **perfect visibility** so that your driving does not get more risky.

HP

99% UV filtering

Thanks to the professional UV filtering layer built into the structure of the Skyfol HP series, **we provide one of the highest values in the film industry**, which will be durable for long years.

Up to 97% light filtering

Your child cannot sleep peacefully because of too much light, while older children cannot see the screen of gadgets. The SkyFol HP series provides excellent **protection against too much glare**.

American quality

The SkyFol HP series is an American product from Virginia, manufactured with the most developed pigments. It provides long-lasting performance without having to fear that it gets purple or detached from the window, even after years.

WHY SHOULD I GET A WINDOW FILM IF MY CAR WINDOWS ARE DYED OR I HAVE A FACTORY-BUILT SUNSHADE?

The table below demonstrates why window films are the most efficient shading solution on car windows.

	SkyFol HP	Dyed glass	Sunshade
Heat protection	Efficient heat protection thanks to its fine metallic layer and to its durable tinting	Factory-tinted windows filter visible light, but they do not filter the infrared range	Limited filtering of visible light and infrared radiation
Visibility	Crystal clear	Crystal clear	Limited visibility, but it can be drawn
Light protection	Between 3 and 50% with seven increments of light protection, from dark to slightly dark	Available in one version, generally with 20% light transmission, which is too little for children and too much for older drivers	Available in one version, generally with a 30-40% hole-structure
UV protection	99% UV protection	Beacuse of their dark character, your pupils dilate, making your eyes more vulnerable. The level of UV protection is usually around 40%	Beacuse of their dark character, your pupils dilate. The level of UV protection is usually around 40%
Security	In case of breakage, chips of glass are held together by the film	In case of breakage, chips of glass are dangerous for passengers	In case of breakage, they provide partial protection against glass chips, which however get into the car

HOW DO WINDOW FILMS WORK?

Automotive window films filter radiation which enters through the car windows and decreases your travelling comfort

UV radiation

Harmful to human skin. It causes the aging, burning, and in extreme cases, unwanted mutations of the skin

The HP series has increased UV protection thanks to its absorbent particles in its structure.

Visible light

Too much visible light has a blurring effect. It gets reflected from screens, therefore strains the eye. 47% of energy comes from this range.

Thanks to its deep-dyed manufacturing technology and to its third-generation pigments, the HP series provides long-term filtering of visible light.

Infrared radiation

Creates an unwanted burning sensation. It is one of the most important ranges from the aspect of heat sensation. 53% of energy comes from this range.

The HP series contains a thin metallic layer which filters infrared radiation.
